

Housekeeping breakout session

Sadie Bartholomew, Computational Scientist / Senior RSE
On behalf of the CF Conventions community

National Centre for Atmospheric Science (NCAS) Computational Modelling Services (NCAS-CMS)
and University of Reading, Meteorology Dept.
CF Conventions Workshop 2026 | 22nd September

Housekeeping

- ...i.e. keeping our 'house' in order: the repositories, the infrastructure (including website), the threads etc.
 - Progress on some new, neglected, or stymied issue or opportunity of importance to CF
 - There are so many options here so let's see what the group wants to do. We could for example tackle one Issue, update the website, .
 - **Hope this can be a tradition Hackathon in the sense of we do some coding/writing and aim to get something done rather than discussing!**
-
- If anyone is aware of any particular GitHub Issue under the housekeeping scope that they would like to give some attention, please come along with your specific requests!
 - Useful links: github.com/cf-convention/cf-conventions/issues,
github.com/cf-convention/cf-convention.github.io/issues, github.com/orgs/cf-convention/discussions
 - If not, some of my suggestions:
 - Persistent removal of trailing whitespace for clean diffs [[#505](#)]?
 - Visualisations of the standard names on the site [[#547](#)]?
 - Adding a page on the website summarising and linking to open Issues to encourage input?
 - Triaging the various Issues to categorise according to how time consuming they might be to sort?
 - Something a bit different, perhaps: draft a blog post about this workshop?
